Geographical focus	US Large Cap
Launch date	3/3/2025
Type of return	Excess Return

Annual Index Performance Reduction* 50 bps

www.InvescoQQQ15index.com

Three reasons to consider Invesco QQQ 15 Index

1 Invesco QQQ

Equity exposure focused on innovation via Invesco QQQ

2 Volatility management

A targeted volatility of 15% annually seeks to help smooth the index performance profile

3 Adaptive asset allocation

Exposures to equities and cash adjusted daily, with the aim of delivering strong risk-adjusted returns over time

The Invesco QQQ 15 Index is a multi-asset, target volatility index that seeks to provide risk adjusted returns while maintaining a 15% volatility target. The centerpiece of the index is the Invesco QQQ exchange-traded fund (ETF) that is designed to track the Nasdaq-100 Index®, providing investors access to some of the most innovative companies in the world. The index adapts to changes in market conditions by adjusting allocations to equities and cash to help mitigate wild swings in the market.

Cumulative performance

Adaptive asset allocation offers the opportunity for potential outperformance

Source: Invesco Indexing. July 5, 2005, to February 28, 2025. The Invesco QQQ15 Index was launched on March 3, 2025. All data prior to a launch date is back-tested (i.e., calculations of how the index might have performed over that time period had the index existed). Back-tested performance is subject to inherent limitations because it reflects retroactive application of an index methodology and selection of index constituents with the benefit of hindsight. Past performance, actual or back-tested, is no guarantee of future performance. Annualized Volatility is the standard deviation of monthly returns.

*The performance reduction is a return adjustment to facilitate higher crediting rates within annuity & insurance products. Please see the index methodology for more information.

Historical Asset Allocation

Important Information

There is no guarantee the 15.0% volatility target will be met. Standard Deviation measures a range of total returns and identifies the spread of short-term fluctuations.

Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio indicates better risk-adjusted performance.

Diversification does not guarantee a profit or eliminate the risk of loss.

The information provided is for informational purposes only and should not be construed as an offer to buy or sell any financial instruments, or a recommendation for any security or fund interest. Invesco Indexing LLC is not an investment adviser or fiduciary and makes no representation regarding the advisability of investing in any security or strategy. There can be no assurance that an investment strategy based on the Invesco Indexes will be successful.

Indexes are unmanaged and it is not possible to invest directly in an Index. Exposure to an asset class or trading strategy represented by an Index is only available through investable instruments (if any) based on that Index. Invesco Indexing LLC does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, derivative or other security, financial product or trading strategy that is based on, linked to or seeks to track the performance of any Invesco Indexing LLC Index.

Invesco Indexing LLC is an indirect, wholly owned subsidiary of Invesco Ltd. The group is legally, technologically and physically separate from other business units of Invesco, including the various global investment centers.

In periods of high volatility, it may be possible for the index to be comprised heavily or fully of cash, which may persist as volatility is elevated. Due to excess return index construction, cash allocations in the index are non-remunerated.
