Word About Risk

Some of the principal risks associated with investing in this Fund include:

Active trading of portfolio securities may result in added expenses and a lower return.

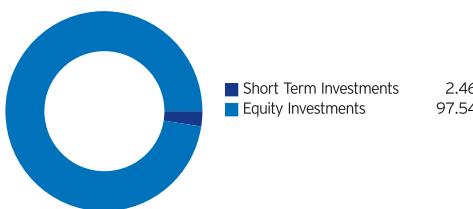

In general, stock values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues. Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested. The Fund is subject to certain other risks. Please see the Declaration of Trust for more information regarding the risks associated with an investment in the Fund.
