

Invesco Small Cap Growth Fund

Q1 2024

Key takeaways

- 1 Investment philosophy**

Invesco Small Cap Growth seeks to create wealth by investing in companies generating sustainable, above-average earnings and cash flow growth that is not fully reflected in investor expectations or equity valuations.
- 2 Process highlights**

Rigorous fundamental research and thematic analysis drive bottom-up stock selection. Disciplined portfolio construction acts as risk control and ensures alignment with small-cap market sectors with modest over/underweights. The fund has a long-term investment horizon with relatively low turnover.
- 3 Potential benefits**

The investment team's unique approach to the small-cap arena sets the fund apart from peers through proprietary financial modeling and a disciplined, risk-controlled portfolio construction process.

Investment objective

The fund seeks long-term growth of capital.

Manager perspective and outlook

- US equities rallied in the first quarter. In February, the S&P 500 Index closed above 5,000 for the first time.
- The US economy defied recession predictions, achieving growth of 2.5% in 2023 as fourth quarter Gross Domestic Product (GDP) growth was 3.4%.
- The labor market remained robust, with continued payroll gains and unemployment still historically low – below 4%.
- Inflation, however, remained persistent. January and February increases in the Consumer Price Index (CPI) were higher than expected, leading the US Federal Reserve (Fed) to defer its proposed interest rate cuts to the second half of 2024.
- Investors appeared mostly pleased by corporate earnings growth, except for three of the so-called “Magnificent Seven” stocks (Alphabet, Amazon, Apple, Meta, Microsoft, NVIDIA, and Tesla). Apple, Alphabet and Tesla’s stock prices suffered due to disappointing earnings, sales, revenue, or weak forward guidance.
- Higher interest rates have slowed the economy and dampened inflation, though the labor market has remained healthy.
- Elevated consumer savings and a strong job market have supported spending despite higher rates and a decelerating economy.
- Forecasting a recession is difficult as labor market resilience and excess savings have offset negative economic data.
- The recent rally in low quality stocks signals to us that the market thinks the Fed has achieved a soft landing, is done raising interest rates, and is ready to pivot to monetary easing. However, we remain cautious.

Onto Innovation Inc	1.18	0.57

As of 03/31/24. Holdings are subject to change and are not buy/sell recommendations.

Portfolio positioning

Relative to its benchmark, the fund is biased toward higher quality and larger market-cap stocks. Underweights include REITs, where we see lack of growth opportunities, and pharma/biotechnology, where we seek to manage the risk of binary events, i.e., developments that cause extreme gains or losses. Positioning changes result from bottom-up stock selection, while disciplined portfolio construction acts as a risk control and ensures alignment with small-cap sector exposure with modest over- and underweights. We scaled back some defensive positioning and introduced more cyclical, but we are aware of potential risks, so we seek to maintain balanced positioning. We see artificial intelligence as a significant technology trend with wide-ranging implications for technology investment, employment and productivity enhancements moving forward.

New Positions

Freshworks is a cloud-based software company that was added to the fund due to improving demand trends for its AI-boosted business solutions, which are designed for increased efficiency and immediate business impact.

Credo Technology develops connectivity solutions and products for the data infrastructure market. Credo is in our view well positioned to benefit from growing demand for infrastructure equipment and tools needed for AI enablement.

Veeco Instruments develops, manufactures and supports semiconductor process equipment and has been experiencing improving business fundamentals as demand for its capabilities have expanded.

Q2 provides digital banking and lending solutions. Its “Innovation Studio Marketplace” has continued to gain traction, helping Q2 gain new clients and retain existing ones.

Notable sales

Flywire is a payments enablement and software company. We sold the stock mainly due to delayed implementations for education clients, which is expected to affect revenues this year.

International Game Technology in our view has considerable long-term value potential, but lacks near-term catalysts, which could pressure its valuation so we exited the stock in favor of better alternatives.

Surgery Partners was sold to reduce the fund's overweight in medical technology, with proceeds reallocated into other health care areas.

Iridium previously entered into an agreement with Qualcomm (not a fund holding) to facilitate direct-to-device satellite messaging. However, this agreement was subsequently terminated, and we exited the stock in an effort to help mitigate potential near-term challenges arising from the termination.

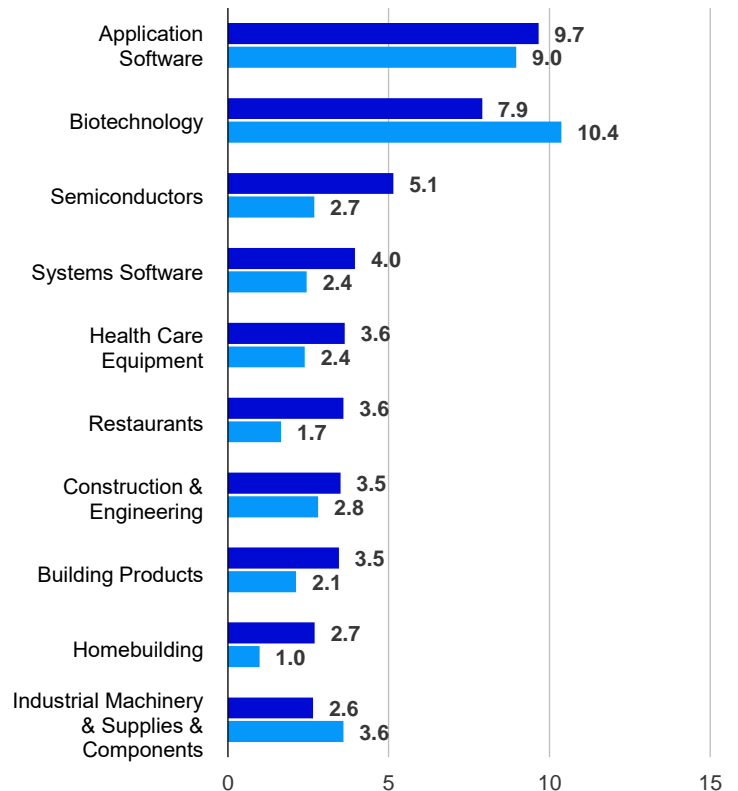

Sector breakdown (% of total net assets)

■ Fund ■ Russell 2000 Growth Index (USD)

Top industries (% of total net assets)

■ Fund ■ Russell 2000 Growth Index (USD)

Top contributors (%)

Issuer	Return	Contrib. to return
Natera, Inc.	46.01	0.78
Wingstop Inc.	42.89	0.55
Kinsale Capital Group, Inc.	56.73	0.49
Saia, Inc.	33.49	0.48
Shockwave Medical, Inc.	70.88	0.45

Top detractors (%)

Issuer	Return	Contrib. to return
International Game Technology PLC	-25.94	-0.19
WESCO International, Inc.	-17.73	-0.19
Freshworks Inc.	-19.78	-0.17
Globant S.A.	-15.16	-0.15
GXO Logistics, Inc.	-12.10	-0.15

Performance highlights

During the quarter, the fund had a positive absolute return and outperformed its benchmark index. Stock selection in the consumer discretionary, industrials, health care, materials, consumer staples, energy and financials sectors added to relative return. An underweight in the materials sector also contributed to positive results. Stock selection in the information technology sector was the only detractor from relative results during the quarter.

Contributors to performance:

Natera benefited from strong quarterly earnings results that reflected solid management execution and strong momentum in volume and profitability for its cancer diagnostic tools.

Wingstop is a popular chicken wing take-out restaurant that has continued to benefit from robust same-store sales growth and greater market penetration as it has expanded into new locations.

Kinsale's premium volume growth improved in the fourth quarter of 2023. Pricing and volume dynamics in the excess and surplus lines market within the property and casualty insurance sector have remained strong, and Kinsale has been a direct participant in this trend.

Saia has been seeing both volumes and pricing benefit from the Yellow Corp. bankruptcy (not a fund holding).

Shockwave stock in our view had impressive performance during the quarter, with positive earnings and revenue numbers and optimism about the company's prospects going forward.

Detractors from performance:

International Game Technology was weak during the quarter, partly due to the pending spinoff of its lottery unit from the gaming unit, and also due to both its earnings results, which were in line with analyst estimates, and forward guidance that was conservative.

WESCO stock struggled during the quarter after reporting sales expectations and earnings for the fourth quarter of 2023 that fell short of analyst estimates.

Freshworks ended the quarter lower despite delivering earnings that exceeded consensus estimates. However, 2024 forward looking guidance was just in line with expectations, which was apparently perceived as a negative and hampered stock performance.

Globant shares declined during the quarter after management's 2024 forward looking guidance was below analyst expectations.

GXO Logistics has experienced weak customer volume growth, which was a headwind to sales growth.

Standardized performance (%) as of March 31, 2024

		Quarter	YTD	1 Year	3 Years	5 Years	10 Years	Since inception
Class A shares inception: 10/18/95	NAV	10.22	10.22	15.81	-5.74	7.64	8.11	10.09
	Max. Load 5.5%	4.16	4.16	9.44	-7.50	6.43	7.50	9.87

Expense ratios per the current prospectus: Class A: Net: 1.16%, Total: 1.16%; Class R6: Net: 0.74%, Total: 0.74%; Class Y: Net: 0.91%, Total: 0.91%.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit [invesco.com](https://www.invesco.com) for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. Returns less than one year are cumulative; all others are annualized. Index source: RIMES Technologies Corp. Please keep in mind that high, double-digit returns are highly unusual and cannot be sustained. Had fees not been waived and/or expenses reimbursed in the past, returns would have been lower. Performance shown at NAV does not include the applicable front-end sales charge, which would have reduced the performance.

Class Y and R6 shares have no sales charge; therefore performance is at NAV. Class Y shares are available only to certain investors. Class R6 shares are closed to most investors. Please see the prospectus for more details.

Holdings are subject to change and are not buy/sell recommendations. Attribution methodology notes: The attribution provides analysis of the effects of several portfolio management decisions, including allocation and security selection. Securities classified as "Other" may include non-equity securities, derivatives, and securities for which a sector classification may not be appropriate. The portfolio is actively managed and portfolio holdings are subject to change. The percentage weights represented for the portfolio are dollar weighted based on market value. **Market allocation effect** shows the excess contribution due to sector/market allocation. A positive allocation effect implies that the choice of sector weights in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Selection effect** shows the excess contribution due to security selection. A positive selection effect implies that the choice of stocks in the portfolio added value to the portfolio contribution with respect to the benchmark and vice versa. **Total effect** is the difference in contribution between the benchmark and portfolio. **Past performance does not guarantee future results.**

About risk

The risks of investing in securities of foreign issuers can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

Growth stocks tend to be more sensitive to changes in their earnings and can be more volatile.

Investments in real estate related instruments may be affected by economic, legal, or environmental factors that affect property values, rents or occupancies of real estate. Real estate companies, including REITs or similar structures, tend to be small and mid-cap companies and their shares may be more volatile and less liquid.

Stocks of small and medium-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

The opinions expressed are those of the fund's portfolio management, are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco investment professionals.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Note: Not all products available at all firms. Financial professionals, please contact your home office.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

* **Alpha** (cash adjusted) is a measure of performance on a risk-adjusted basis. **Beta** (cash adjusted) is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio indicates better risk-adjusted performance. **Information Ratio** is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Standard deviation** measures a fund's range of total returns and identifies the spread of a fund's short-term fluctuations. **Tracking Error** is defined as the expected standard deviation of a portfolio's excess return over the benchmark index return. The **up and down capture** measures how well a manager was able to replicate or improve on periods of positive benchmark returns and how severely the manager was affected by periods of negative benchmark returns. **Maximum Drawdown** is the maximum observed loss from a high to a low of a portfolio, before a new high is attained. Maximum drawdown is an indicator of downside risk over a specified time period. **Weighted Average Market Cap** is a measure of the average size of company held in a portfolio. The percentage of the portfolio invested each company, or its weight, is multiplied by its size (market capitalization). An average of the weighted size of all companies held is then calculated. **Price/earnings** measures the price per share relative to the earnings per share of the company while excluding extraordinary items. **Price to book** measures the firm's capitalization (market price) to book value. **Est. 3-5 year EPS (Earning per share) growth** measures the earning per share growth from FY3 to FY5. **ROE** is the Return on Equity that measures the fund's annual return relative to total shareholders' equity. This ratio evaluates how quickly investments can be turned into profits. **Long-term debt to capital** measures a fund's financial leverage by calculating the proportion of long-term debt used to finance its assets relative to the amount of equity used for the same purpose. A higher ratio indicates higher leverage. **Operating margin** measures the profit a fund makes for every dollar of sales after paying the variable expenses. **Contribution to Return** measures the performance impact from portfolio holdings over a defined time period. It takes into account both weight and performance of the portfolio holdings. Contribution to Return is calculated at security level.
