Fund Assets as of 2/28/2025

Invesco Small Cap Value Fund:
\$6.56 billion

Invesco Value Opportunities Fund:
\$4.79 billion

Investment philosophy

We seek to provide investors exposure to small-cap and mid-cap companies whose stock price has become disconnected from the intrinsic value of the business. Maintaining a longer-term investment horizon allows this traditional approach to value investing to play out across cycles.

Fund objectives:

Invesco Small Cap Value Fund:
Long-term growth of capital.

Invesco Value Opportunities Fund:
Total return through growth of capital and current income.

Market overview

The US stock market declined broadly in February as softer economic data and higher than expected inflation data worried investors. Concerns about trade, tariff and tax policies from the new administration, and with heightened geopolitical tensions also dampened investor sentiment. The Consumer Price Index (CPI) for January revealed a higher-than-expected increase of 0.5% due to higher gas prices, food, and housing costs.¹ The 12-month headline inflation rate rose to 3.0% in January, up 0.1% from the 2.9% annual gain reported in December.¹ Job growth was slightly below expectations in January, with the addition of 143,000 new jobs.² The unemployment rate remained steady at 4.0%, and wages rose 4.1% over the over the past 12 months.² The US economy grew modestly at an annual rate of 2.3% in the fourth quarter of 2024, based on the advanced estimate of gross domestic product (GDP), and following a 3.1% increase in the third quarter. The largest contributor to GDP, the personal consumption expenditures (PCE) price index (reflecting the period for the past 12 months) has risen from a low of 2.1% in September to 2.5% in January, supporting the Federal Open Market Committee's assessment that "inflation remains somewhat elevated."³ The threat of tariffs and a trade war presented another inflationary risk, increasing the likelihood that the Fed would hold interest rates steady over the next few months.

The S&P 500 returned -1.30% for February.⁴ Amid the pessimism, investors gravitated to "safe haven," defensive areas of the market, with sectors like consumer staples, utilities and health care posting gains. Energy, real estate and financials also had positive returns, while consumer discretionary, communication services, industrials and information technology (IT) declined.

Performance drivers

Invesco Small Cap Value Fund (Class A shares at NAV) declined by -4.40% in February, underperforming the Russell 2000 Value Index, which returned -3.83%. On an absolute basis, several of the fund's IT holdings were the largest detractors, including **Onto Innovation**, **Coherent** and **Lumentum**. Onto Innovation is a semiconductor capital equipment manufacturer, and Coherent and Lumentum are communications equipment makers. These companies are tied to Artificial Intelligence (AI) development and investment, and they declined in tandem with other IT stocks related to the AI theme.

Invesco Value Opportunities Fund (Class A shares at NAV) declined by -4.61% in February, underperforming the Russell Midcap Value Index, which returned -1.82%. On an absolute basis, several of the fund's IT holdings were the among the fund's largest detractors, including **Coherent**, **Marvell Technology** and **Lumentum**. Marvell provides data infrastructure semiconductor solutions, and declined along with Coherent and Lumentum amid the AI related selloff. In the health care sector, **Avantor** was another detractor from absolute returns. Avantor is global provider of essential products and services for the life sciences, advanced technologies and applied materials industries to support scientific research and innovation. The company's earnings were in line with expectations, but revenues were weaker than anticipated.

Investor fears were elevated in February; however, market declines can present opportunities for long term investors. Our team seeks to take advantage of short-term investor fear using our intrinsic value investment process. Recent market volatility has provided an opportunity to purchase new companies into the Funds, and it has also allowed us to add to many existing Fund positions at attractive prices.

Portfolio Positioning

We use an intrinsic value approach to stock selection in the Funds. The portfolios are not constructed based on a short-term macroeconomic view; instead, positioning is driven by bottom-up stock selection based on a company's intrinsic value. We seek to create wealth by maintaining a long-term investment horizon and investing in companies that we believe are significantly undervalued on an absolute basis. Given our long-term investment horizon and focus on intrinsic value, we believe the Funds are currently positioned in more economically sensitive stocks versus the Russell 2000 Value Index and Russell Midcap Value Index. At month end, we believe the difference between the market price and the estimated intrinsic value of the Funds' holdings was very attractive, according to our estimation. Though there is no guarantee that the market value will ever reflect our estimate of the Funds' intrinsic value, we believe the gap between price and estimated intrinsic value may indicate above-average capital appreciation potential. We are constructive on the current portfolios and believe the Funds' investments may be positioned for solid absolute and relative performance.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com/performance for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or loss when you sell shares. Return figures for periods less than one year are cumulative. Return figures for periods greater than one year are annualized. Index returns do not reflect any fees, expenses or sales charges. Performance shown at NAV does not include applicable front-end sales charges (max. 5.50%), which would have reduced performance. Performance for other share classes will differ due to differing sales charge structures and class expenses. Fund performance reflects any applicable fee waivers and/or expense reimbursements. Had the adviser not waived fees and/or reimbursed expenses currently or in the past, returns would have been lower. See current prospectus for more information.

Invesco Small Cap Value Fund has limited public sales of its shares to certain investors. For more information on who may continue to invest in the fund, please see the prospectus.

Invesco Small Cap Value Fund has limited public sales of its shares to certain investors. For more information on who may continue to invest in the fund, please see the prospectus.

Intrinsic Value: Intrinsic value is the perceived or "true value" of an investment, which may or may not equal the current market price due to over- or under-valuation by the market. Intrinsic value is commonly used in fundamental analysis but does not have a universal methodology for calculation. One firm's Intrinsic Value calculation of an investment may be different from another.

About risk

Invesco Small Cap Value Fund and Invesco Value Opportunities Fund – Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty and management risks. An investment in a derivative could lose more than the cash amount invested.

The risks of investing in securities of foreign issuers, including emerging market issuers, can include fluctuations in foreign currencies, political and economic instability, and foreign taxation issues.

A value style of investing is subject to the risk that the valuations never improve or that the returns will trail other styles of investing or the overall stock markets.

The Funds listed are subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the Fund.

Investments in real estate related instruments may be affected by economic, legal, or environmental factors that affect property values, rents or occupancies of real estate. Real estate companies, including REITs or similar structures, tend to be small and mid-cap companies and their shares may be more volatile and less liquid.

Stocks of small and mid-sized companies tend to be more vulnerable to adverse developments, may be more volatile, and may be illiquid or restricted as to resale.

Invesco Value Opportunities Fund - In general, stock values fluctuate, sometimes widely, in response to activities specific to the company as well as general market, economic and political conditions

Larger, more established companies may be unable to respond quickly to new competitive challenges such as changes in consumer tastes or innovative smaller competitors. Returns on investments in large capitalization companies could trail the returns on investments in smaller companies.

Because the Fund may hold a limited number of securities, a change in the value of these securities could significantly affect the investment value of the Fund.

Before investing, investors should carefully read the prospectus and/or summary prospectus and carefully consider the investment objectives, risks, charges and expenses. For this and more complete information about the fund(s), investors should ask their financial professional for a prospectus/summary prospectus or visit [invesco.com/fundprospectus](https://www.invesco.com/fundprospectus).
